Installation

Wireless Installation Considerations

The DCS-8000LH lets you access your network using a wireless connection from anywhere within the operating range of your wireless network. However, the number, thickness and location of walls, ceilings, or other objects that the wireless signals must pass through, may limit the range. Typical ranges vary depending on the types of materials and background RF (radio frequency) noise in your home or business. The key to maximizing wireless range is to follow these basic guidelines:

1. Minimize the number of walls and ceilings between your adapter and other network devices (such as your Network Camera) - each wall or ceiling can reduce your adapter's range from 3-90 feet (1-30 meters).
2. Be aware of the direct line between network devices. A wall that is 1.5 feet thick (.5 meters), at a 45-degree angle appears to be almost 3 feet (1 meter) thick. At a 2-degree angle, it looks over 42 feet (14 meters) thick. Position your devices so that the signal will travel straight through a wall or ceiling (instead of at an angle) for better reception.
3. Building Materials make a difference. A solid metal door or aluminum studs may weaken the wireless signal. Try to position your access points, wireless routers, and other networking devices where the signal passes through drywall or open doorways. Materials and objects such as glass, steel, metal, walls with insulation, water (fish tanks), mirrors, file cabinets, brick, and concrete will degrade your wireless signal.
4. Keep your product at least 3-6 feet or 1-2 meters away from electrical devices or appliances that generate RF noise.
5. If you are using 2.4 GHz cordless phones or other radio frequency sources (such as microwave ovens), your wireless connection may degrade dramatically or drop completely. Make sure your 2.4 GHz phone base is as far away from your wireless devices as possible. The base transmits a signal even if the phone is not in use.

Troubleshooting

1. What can I do if I forget the password for my camera?

If you forget your password, you will need to perform a factory reset of your camera. This process will change all your settings back to the factory defaults. It is therefore recommended that you make a record of the password for future reference. To reset your camera, please use an unfolded paperclip to press and hold the RESET button for at least 10 seconds while your camera is plugged in.

2. Why is the camera view hazy or bright when using night vision mode?

The IR night vision lights on your camera may be reflecting off a nearby surface or window. Try repositioning your camera to avoid reflections or glare.

3. What can I do if my camera is not working correctly?

First, check the camera LED status.

If the LED show green color that the camera is working, please make sure that:

- Your router has an active Internet connection.
- Both your mobile device and camera have a working Internet connection.
- If your camera is still not working, you may need to reset the camera and run mydlink lite APP.

To reset your camera, please use an unfolded paperclip to press and hold the RESET button for at least 10 seconds while your camera is plugged in.

4. Can I save video clips from my DCS-8000LH?

You can download recorded video clips to your mobile device by pressing the manual record button on the Live View page in the app. After you press stop, a pop-up will notify you of where it was saved to.

5. How do I send e-mail notifications from my DCS-8000LH when sound or motion is detected?

type of notification.

1. How can I access my DCS-8000LH remotely through the Internet?

In order to use your DCS-8000LH remotely through the Internet using the mydlink Lite app, you must register your camera with a mydlink account. You can do this using the free mydlink Lite app. Please go to **Mobile App Setup on page 9** for more information.

You can update your camera's firmware by using the mydlink Lite app. You will receive a notification in your app when a new firmware is available. Simply tap **Upgrade** in the pop-up to proceed with updating your firmware.

3. What can I do if I can't receive the verification e-mail for my mydlink account?

First, check your Spam or Junk Mail folder. It's possible that your e-mail host may be sending the verification e-mail to your Spam folder or may be blocking the e-mail. Spam filters used by some e-mail providers may block or blacklist e-mails they perceive to be spam.

Note: If you are using a business e-mail address, your company's e-mail system may be using a spam rule to filter incoming e-mails, and may block mydlink e-mails; you may need to contact your network administrator for more information.

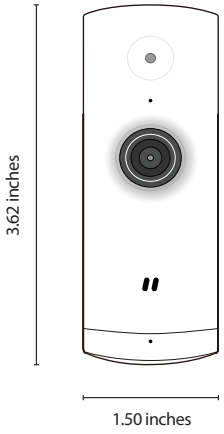

Second, try resending the verification e-mail:

1. Go to mydlink portal **www.mydlink.com** and log in to your mydlink account.
2. Click on your account name at the top of the page.
3. Click on the **Resend Verification E-Mail** link.

If you still did not receive the e-mail, try using a different e-mail address or e-mail host.
